DETAILED ACTION

This office action is in response to the amendment filed February 18, 2005 in which claims 25-42 were canceled; and claims 79-85 were added.

The rejection of the claims under 35 USC 103 over Kirk is withdrawn in view of Applicant canceling the claims in question.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 43, 49, 50, 59, 60, 66, 67, 70, 76, 77, 82, 83 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 43, "thermalstabilizer" should read – thermal stabilizer--.

In claims 49, 59, 66, 76, 82 and 83, the term "fossil fuel" appears 3 times.

Claims 50, 60, 67 and 77 are rejected because the language "selected from the group selected from" is improper Markush language.

In claim 70, "feed" should read – fuel --.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 43-45 are rejected under 35 U.S.C. 102(b) as being anticipated by Finnan (US 4,504,499).

Finnan teaches a heat-stabilized carotenoid-colored edible oil comprising stabilizing amounts of at least one of the following antioxidants (thermal stabilizer): lauryl thiopronate, dilauryl thiopropionate, a tocopherol and mixtures thereof (see abstract). The edible oil may be wheat-germ oil (see col. 2, lines 55-65) and the carotenoid may be beta-carotene or lycopene (see col. 1, lines 48-60; Example 1). The carotene is suspended in an edible oil such as peanut oil (may also function as a thermal stabilizer)(see col. 3, lines 62-65). Finnan is not directed to a fuel additive; however, since the claims are directed to a composition, Applicant's intended use is given no patentable weight.

Accordingly, Finnan teaching all the material limitations of the claims anticipates the claims.

5. Claims 43-45, 48 and 50 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujiwara (US 5,705,526).

Fujiwara teaches a composition comprising lycopene, beta-carotene, alpha-carotene, d-alpha-tocopherol and a mixture of wheat-germ oil and a vegetable oil (see abstract). Fujiwara also teaches that the composition may comprise a solvent and a dispersant (see col. 3, lines 51-56). The carotene of the example is dispersed in palm oil (see col. 5, line 2). Fujiwara is not directed to a fuel additive; however, since the

Art Unit: 1714

claims are directed to a composition, Applicant's intended use is given no patentable weight.

Accordingly, Fujiwara teaching all the material limitations of the claims anticipates the claims.

6. Claims 46, 47, 71-75 and 84-85 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art fails to teach or suggest a fossil fuel additive or fossil fuel composition comprising an oil extract that is barley, contains meadow foam oil as the thermal stabilizer or that the additive contains a solvent.

7. Claims 52-58, 62-65, 68, 69 and 79-81 are allowable because the prior art fails to teach or suggest a fossil fuel composition comprising a base fuel and an additive comprising a plant oil extract derived from grain, a carotenoid and a thermal stabilizer.
